FAQ

Q : When adding device by LAN or serial number, it warns " device is not online" or "device is not registered"

A : 1. Please make sure the internet which the device in could be access to internet normally, what's more, the router has opened the DHCP function.
2. If you have changed the device's parameters, please click RESET button 10 seconds to restore its default parameters.

Q : Why it reports " memory card fault" when insert the SD card?

A : 1. The device only supports the FAT32 file system, and storage couldn't be above 32GB.Please confirm the file system type and whether the SD card capacity is beyond the normal use scope.
2. The SD card appears some damage, the device couldn't read and write as usual, which needs to reformat by computer before using.

Q : Why the playback is intermittent?

A : Due to the limited use life of the SD cards, the continuous video will largely reduce the SD card life, when the device detects the moving images, the intermittent condition could save storage space and prolong the SD card life.

11

Q : Does the device support USB and charger for power supply?

A : Not available. Please use the power supply to offer the stable power.

Q : The device is online, and also there is motion happening in surveillance area，but why no reveiving alarm information on mobile phone?

A : 1. Please make sure that the device IP fro APP is running on the mobile, and motion detection function has been open.
2. If you use Apple mobile, please open the " message notification" function during the IOS operation system " setting up----notice"
